

HCI HAPPY PRESCRIPTION CANONICAL V1

Purpose

Canonical prescription matrix for the HAPPY Engine. It connects HAPPY/COMANDO gaps to the HAPPY exercise library and cross-validates prescription using HCI performance evidence.

Engine Principle

The engine prescribes by GAP, not by absolute score. Lowest dimension -> critical parameter -> cross-evidence -> exercise prescription -> reassessment.

Selection Flow

- Calculate 5 HAPPY dimensions from subjective indicators.
- Identify the lowest dimension and Top 3 dimensional gaps.
- Open the lowest dimension and identify the parameter with the largest negative contribution.
- Cross-check the parameter with HCI evidence: TARGETS, STRUCTURE, RHYTHM, RESULT.
- Classify severity.
- Select exercises from hci_happy_library_canonical.json.
- Generate coach prescription and athlete-safe development plan.
- Reassess after the prescribed block.

Severity Bands

Level	Range	Meaning
CRITICAL	< 2.0	Immediate development priority
ATTENTION	2.0 - 2.99	Needs focused intervention
STABLE	3.0 - 3.99	Monitor and consolidate
HIGH_PERFORMANCE	4.0 - 4.49	Maintain and refine
ELITE	4.5 - 5.0	Reference behavior

Output Rule

Coach output may use severity labels. Athlete output must use developmental language and avoid deficit-focused labels.

Integration Note

Prescription must always come from the canonical HAPPY library. The dashboard only displays. The engine decides. The library prescribes.
