

HCI HAPPY SELF ANALYSIS METHODOLOGY

HCI HAPPY SELF ANALYSIS METHODOLOGY

Purpose

The HAPPY Self Analysis Methodology is a structured athlete self-assessment system designed to create a communication bridge between athlete and coach.

The athlete does not evaluate the HAPPY dimensions directly.

Instead, the athlete answers operational indicators that describe their current state. The HCI engine then interprets those indicators and generates diagnoses, alerts, developmental priorities, and recommended exercises.

COMANDO MODEL

COMANDO measures the athlete's current execution state.

C — Confidence

How much the athlete believes they can execute the performance required to achieve their objective.

O — Organization

How organized the athlete's routine is to support performance.

M — Management

How effectively the athlete executes what was planned.

A — Analysis

Ability to reflect on performance and learn from experiences.

N — Nerve

Ability to maintain emotional control under pressure.

D — Discipline

Ability to do what must be done even when motivation is low.

O — Opportunity

Ability to recognize and use opportunities for growth.

HAPPY PERFORMANCE MODEL

H — Heed

Competitive awareness before, during and after training and competition.

Measures:

- awareness
- presence
- attentional control
- arousal regulation

A — Alignment

Clarity regarding what must be done to move toward the objective.

Measures:

- direction
- clarity
- coach-athlete alignment

P — Plan

Perceived fit between the coach's plan and the athlete's reality.

Measures:

- adherence
- confidence in the process
- perceived relevance

P — Powering

Amount of energy invested in executing the plan.

Measures:

- effort
- engagement
- commitment

Y — Yearn

Champion mindset and willingness to dedicate time and sacrifice comfort.

Measures:

- ambition
- dedication
- long-term commitment

HAPPY DIMENSIONS

These dimensions are NOT scored directly by the athlete.

The HCI engine calculates them from COMANDO and HAPPY indicators.

SELF LEADERSHIP

Personal responsibility, self-regulation and ownership.

TEAM LEADERSHIP

Quality of communication and collaboration with the coach and support team.

WISDOM

Ability to transform experience into learning.

MANAGEMENT

Ability to organize and execute a performance system.

ENVIRONMENT

Ability to manage context, pressure and external influences.

ENGINE OUTPUT

The engine produces:

- Happy State Score
- Radar Profile
- Priority Dimension
- Coach Alerts
- Development Priorities
- Recommended Exercises
- Athlete Reflection Report

PHILOSOPHY

Athletes answer indicators.

The engine evaluates dimensions.

The coach receives intelligence.

The athlete receives guidance.

The objective is not merely measurement.

The objective is the development of self-leadership, performance awareness and sustainable excellence.
