

HCI HAPPY SELF ANALYSIS METHODOLOGY

SPEC V2

PURPOSE

The HAPPY Engine is a human-performance intelligence system designed to identify developmental gaps that may limit athletic progression.

The athlete answers subjective indicators.

The engine evaluates dimensions.

The coach receives actionable intelligence.

CORE ENGINE PRINCIPLE

The HAPPY Engine does not operate using absolute score ranking.

The HAPPY Engine operates using GAP detection.

Process:

1. Calculate all dimensions.
2. Identify the largest dimensional gap.
3. Identify the parameter responsible.
4. Identify the intervention.
5. Prescribe exercises.
6. Reassess.

Priority order:

Gap #1

Gap #2

Gap #3

The lowest dimension becomes the primary development target.

PHILOSOPHY

The objective is not measurement.

The objective is self-leadership development,
performance awareness,
coach intelligence,
and sustainable excellence.
